MEMORANDUM FOR: Assistant Deputy Director for Support

SUBJECT : Emergency Power for Agency Headquarters

REFERENCE : Memo dtd 26 Apr 66 to D/L fm ADD/S,
same subject

1. This memorandum is for your information only and is a periodic report as requested by the reference.

2. Modifications of Switchgear for the Two 2000 KW Units. The General Electric Company has submitted a proposal to modify the controls to permit parallel operation, with the commercial power source, without interrupting the power to the Headquarters Building. General Electric's cost for this modification is \$8,500 if work is performed without recourse to overtime. The proposal was submitted to the General Services Administration (GSA) for their review and comments. Inasmuch as this modification is primarily an Agency requirement, GSA has agreed that the most effective procedure is for the Agency to contract for installation of the equipment without going through the expensive and time consuming process of staffing through the Design and Construction Division, Public Buildings Service, and a subsequent GSA contract. We are requesting from the Office of Planning, Programming and Budgeting, through the Deputy Director for Support, an allocation of \$10,000 for this work. The contract will be administered by the Real Estate and Construction Division.

3. Emergency Power for the Signal Center. This Office is in the process of preparing a scope of work and cost estimate for the installation of an 800 KW automatic start, gas turbine, electric set which will be located in the powerhouse. This unit will require approximately 50 seconds before it is up to full speed and on the line.
